Center for Laser & Aesthetic Medicine

Removal of Unwanted Hair

Looking your best does wonders for your attitude and self- confidence.

Dr. Steve Zakany & the staff of Aesthetic Solutions perform leading aesthetic laser and non-laser procedures, provide medical grade skin care products, and offer unmatched personalized service to help you look younger and feel better about yourself.

We care about the health of your skin and want to help put you on the road to a smoother, healthier, and younger looking appearance.

Good results & your safety are as important to us as they are to you. All laser procedures are performed by physicians or laser technicians that have undergone advanced training & have been certified by the National Council on Laser Excellence (NCLE) for Aesthetic Laser including Hair Removal.

Some of our competitors may claim that they have one laser that will remove hair from all skin types & perform 10 other functions.

Technically, this is true in the same way that you can eat soup with a fork. Different lasers work better for different skin types. We have 2 “state of the art” lasers & our staff is trained choose the “right tool for the job”.

We would like to invite you for a free consultation to discuss the options.

We want to be your Aesthetic Solution!

Stop shaving and waxing forever! Our hair removal lasers are designed to destroy actively growing hair forever.

Face (lips & chin)	\$100
Chin	\$75
Upper lip	\$50

Buy series of 5 treatments and get 6th treatment free. Series must be paid upfront in full. 2 or more areas treated 15% off.

How does a laser or light-based system remove hair? The system emits a gentle beam of light that passes through the skin, to the hair follicle, where it is absorbed. Upon absorption, the energy is transformed into heat, which can disable the follicle, while leaving the surrounding tissue unharmed.

How do I know if I'm a good candidate for laser or light-based hair removal?

Generally speaking, if you are concerned about unwanted hair, you are probably a candidate for hair removal. Laser or light-based systems are a faster, easier alternative for hair removal.

Is the treatment painful? Most individuals describe the treatment as a series of slight pin pricks or rubber band snaps to the skin. The majority of patients tolerate this sensation without anesthetics. Additional comfort is provided by applying cooling to the area to be treated. Within about 30 minutes of treatment, the area may become pink or red; this may last from a few hours to one day.

How long does it take? With this procedure numerous hairs are removed at the same time. The amount of time needed depends on the size of the area to be treated. The lip usually takes less than one minute; other areas, such as the leg, may take significantly longer.

How many treatments will be necessary? Hair grows in cycles. The laser or pulsed light only affects hair when it is in its early growth phase. In fact, the system will disable follicles that are actively producing hair at the time of treatment. At any time, some hair follicles are dormant. Repeated sessions will be necessary to treat these follicles when they re-enter the growth phase.
