Now you can call or TEXT our main number with questions! 303-666-1199

...and November is here!

Thank you for being part of the AES family!

Aesthetic Solutions has been working hard to offer three new and exciting procedures to our customers. These include a the Oh-boy-shot as part of our Women's Health Program, IV Nutrient Hydration Therapy, and Targeted Cool Sculpting weight loss. See below for details.

Women's Health and the O-Shot

Aging is inevitable, but how you age is not thanks to bio-identical hormone optimization (BIHO). Hormone imbalance is a common problem in both men and women. The process of aging brings a litany of changes to the body, most unwelcome. Hormones are produced by several glands in your body and are essential to your health and your physical appearance.

Hormones decline in all people as they age and restoring them to optimum levels will result in more energy, better memory, a healthier heart, stronger bones, and a more youthful glow.

Bio-identical hormones are medications created with a molecular formula identical to the hormones our body makes. Estrogen and progesterone naturally decrease with age and using bio-identical hormones can help hormones increase to the levels that were present in our youth. This can help you achieve and maintain a better body, a younger appearance and better health in general.

Determining which hormones to replenish, how much of each to prescribe and how to keep all of these hormones working in harmony requires testing and careful supervision. Dr. Todd Dorfman will partner with you to create a multi-faceted program that meets your health goals and successfully manages your aging process. Dr. Dorfman will keep your health on course, tracking progress, reviewing test results, discussing examinations and determining adjustments to your personal program along the way. Learn more:

The O-Shot (Oh-boy-shot)

This non-surgical procedure takes around 40 minutes, and involves injecting platelet-rich plasma (PRP) back into your body. Admittedly, it sounds incredibly alien. It works by doctors drawing half a tablespoon of blood from your arm like in a blood test. The blood is then spun in a centrifuge - a machine that allows the blood components to separate, which isolates the PRP. Learn more:

IV Nutrient Hydration Therapy

- Our drips are a combination of different vitamins, mineral and amino acids which are essential nutrients.
- All of our drips will hydrate you, replenish your nutrients and give you a great boost of energy by replenishing your B vitamins
- Most people think it's normal to feel exhausted after a day's worth of work, and they go on just accepting it. Well, it's not normal. If we had our proper levels of nutrients, we wouldn't be feeling like that.

Cool-Sculpting with Hcg Diet

WHAT IS COOLSCULPTING?

Aesthetic Solutions is pleased to offer Coolsculpting to our clients through our partner program with Cedalion Health. This innovative technology allows for targeted fat loss. We are offering a combination of this technology with our proven Hcg weight loss program which work

synergistically to both destroy fat cells in target specific areas and provide for global weight loss.

The CoolSculpting procedure is an innovative way to contour your body by freezing unwanted fat away with no surgery or downtime. In just a few treatments you will be back to feeling and looking your best.

Esthetician Special

- PRP, Microdermabrasion, or any other add-on service to a procedure: Save 35% off of the normal add-on price. Consult your service provider for applicable add-on services.

Injector Special

Tuesday's with Courtney: Courtney Murphy joins AES! Come see Courtney and receive a 10% discount on all Women's Health Services and injectables she performs.

Aesthetic Solutions Featured Provider

Meet Courtney Murphy

Courtney Murphy is a Licensed RN with a passion for Women's Sexual Health and enhancing the natural beauty of her customers through her expertise with neurotoxin and filler injections. Her work in Women's Health has been both transformative and gratifying. "There is no need to compromise the quality and enjoyment of our lives as we age. Let's do it the best that we can!"

Product Special, all sunscreens

Five reasons to wear your sunscreen in the winter as well as the summer.

1. Snow nearly doubles your exposure to UV rays.

If you're like us, the lure of the outdoors is too much to resist. The Rocky Mountains are our backyard, so we bundle up and head to the high country. Some of us are better than others on the slopes, but whether you excel at making fresh tracks or spend more time than you'd like closer to the ground, the snow reflects back 80-percent of UVA rays, nearly doubling your exposure!

2. The atmosphere is thinner at high elevations.

When you're taking in those mountain views, keep in mind UV increases by nearly four percent for every 1,000-foot increase in elevation. That's a lot of exposure—much more than any day at the beach.

3. UVA rays can go through glass.

Even if you prefer the view from inside where it's nice and warm, you're still at risk for UVA skin damage. While UVB rays are mostly blocked by glass and clouds, 50- to 60-percent of UVA rays go right through windows.

4. The Earth is closest to the sun in the middle of the winter.

The changes of the season are a result of the tilt of the Earth, not how close our little blue planet is to the sun. In the northern hemisphere, we're closest to the sun about two weeks after the winter solstice. We're the furthest from the sun about two weeks after the summer solstice.

5. Ozone, the Earth's "sunscreen," is the thinnest during the winter.

Ozone acts like the Earth's sunscreen, filtering out and protecting us from harmful UV rays. In the Northern Hemisphere, ozone levels are generally the lowest from December to March.
